SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR AUDITING PERFORMANCE IN A SUPPLY CHAIN FRAMEWORK

ABSTRACT

A system, method and computer program product are disclosed for auditing performance in a supply chain framework. Data is collected from a plurality of supply chain participants utilizing a network. This data relates to the sale of goods by the supply chain participants. Access to the data is allowed utilizing a network-based interface. Electronic order forms are generated based on the data for a supply chain participant. The generated electronic order forms are sent to the to the supply chain participant utilizing the network. A performance of the delivery of the goods by the supply chain participant is then tracked. The tracked performance of the delivery of the goods by the supply chain participant is subsequently audited.
